

Claims

1. A watch comprising :

- a case (10) defining a housing,
- a movement (12) arranged inside the housing,
- display means (16, 17) carried by the movement (12),
- an assembly member (22) connecting the movement (12) to the case (10), and
- a control system (20) accessible from outside the case (10) intended for correcting the display means (16, 17)

5 in which watch the assembly member (22) allows the movement (12) to be displaced with reference to the case (10), and the movement comprises means (26) for correcting the display means (16, 17), the watch being characterized in that :

- said assembly member (22) is so constructed that, in at least one predefined position of the watch, the movement (12) occupies a defined position in its housing, and
- in that said control system (20) comprises :
 - a button (21) accessible from outside the case (10),
 - a stem (34) attached to the button (21) and passing through the case (10), and
 - a connecting member (28) designed to connect said button (21) to the correcting means (26) and constructed in such a way that, in said defined position, it can be connected to said stem (34).

10 2. The watch as claimed in claim 1, characterized in that said assembly member (22) is constructed in such a way as to allow the movement (12) to rotate in its housing.

15 3. The watch as claimed in claim 2, characterized in that said movement (12) is of automatic type, its rotation winding up its driving spring.

20 4. The watch as claimed in claim 2, characterized in that the movement is encircled by a weighted (26) ring (24) and constructed in such a way as

to define an eccentric mass causing the movement (12) to rotate in its housing.

5. The watch as claimed in claim 4, characterized in that the correcting means comprise a hand-setting stem (26) and in that the connecting member comprises a connecting piece (28) that is flush with said ring (24) and has a flared portion (28b) such as to guide the stem (34) attached to the button (21) so that it engages in the connecting piece (28).
10. The watch as claimed in claim 1, characterized in that the case (10) has a tube (30), engaging with the button (21) and with the stem (34) attached to the button, and a seal (32), between the button (21) and the tube (30), for sealing the passage of the stem (34) through the case (10).
